# **WeatherAction Extreme Weather Warning** issued 25 Jun 2019

The end June - early July **heatwave** in west Europe and Britain-Ireland was warned by WeatherAction 13 weeks ahead. (WeatherAction forecast map below)

After that a very important Solar activity and "RedWeather" period follows.

From around 4 / 5 July we expect the first new sunspots / important activity for about 40days to appear on the Solar disc.

Next follows a '**RedWeather**' extreme period ~8-11July of **intense storms, thunder, hail, tornadoes, Tropical storm formation & floods in many parts of the world.**

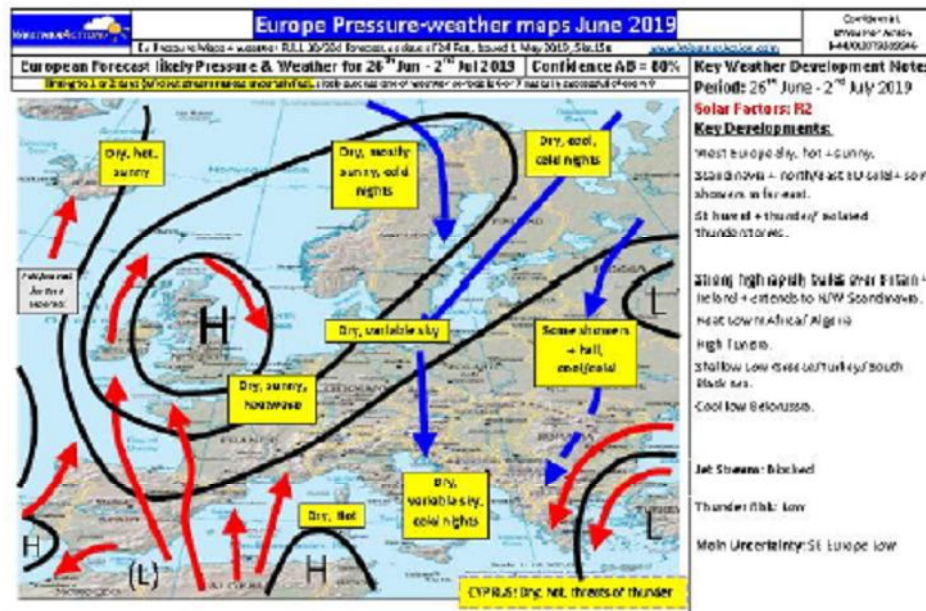

• Specific long-range forecasts for Europe, Br & Ireland and Usa are available via [www.WeatherAction.com](http://www.WeatherAction.com)

26 <sup>th</sup> June - 2 <sup>nd</sup> July	AB = 80%
Heatwave builds from South. Dry hot sunny. (As 65-95d with extra heat in far south)	
Winds: Variable / light bec E'ly / ENE / calm	
Temps: Hot	
Sky: Sunny	
Solar Factors: R2	
Thunder Risk: Low	
Likely possible weather map scenario: High from South Azores extends to takes over Britain & Ireland. France Lower pressure	
Jet Stream: Big meander/blocked	

## **We also predict MAJOR Earthquakes + Volcanism ~8-11 July + 2 days**

• These weather & earthquake &c extremes are nothing to do with CO2 - the levels of which are an EFFECT NOT CAUSE of climate changes. "Climate-Emergency" / "Extinction-Rebellion" is manipulated protest orchestrated by Media, mega-corporations and the super-rich. It isn't to control climate but to control you. #Scientists4Truth / #Action4Life Top Leaflet (issued Dec 2018): <http://bit.ly/2r4Wg8n>

# THE HISTORIC WINTER SuperCold + Snow blast - Britain + Ireland, Scandinavia +NW Eu (and Usa) end-Feb into March and then COLD LATE SPRING are **THE END** of ManMade Global-Warming Scam.

- The sea-shore froze all over N Europe
- The UK had the coldest 28<sup>th</sup> Feb since 1785
- BBC said snowdrops in Jan were Global-Warming. Then they said the supercold in Feb was Global-Warming!

• Piers Corbyn pointed out in an interview on Talk Radio James Whale show Thurs 1st Mar that the CO2 warmists - believers in so-called Man-made Global-Warming - were referring to Sudden Stratospheric Warming and mildness in the Arctic as if these were somehow part of Global-Warming and causing the cold events when they are **nothing to do with CO2**. In fact, he said, the events in the stratosphere are solar driven and their impact transmits **DOWNWARDS** not upwards from some delusional surface warming.

• **The mildness in the Arctic covers a much smaller area than the cold blast and is NOT a CAUSE of anything but just one part of the solar driven Wild Jet Stream changes"**

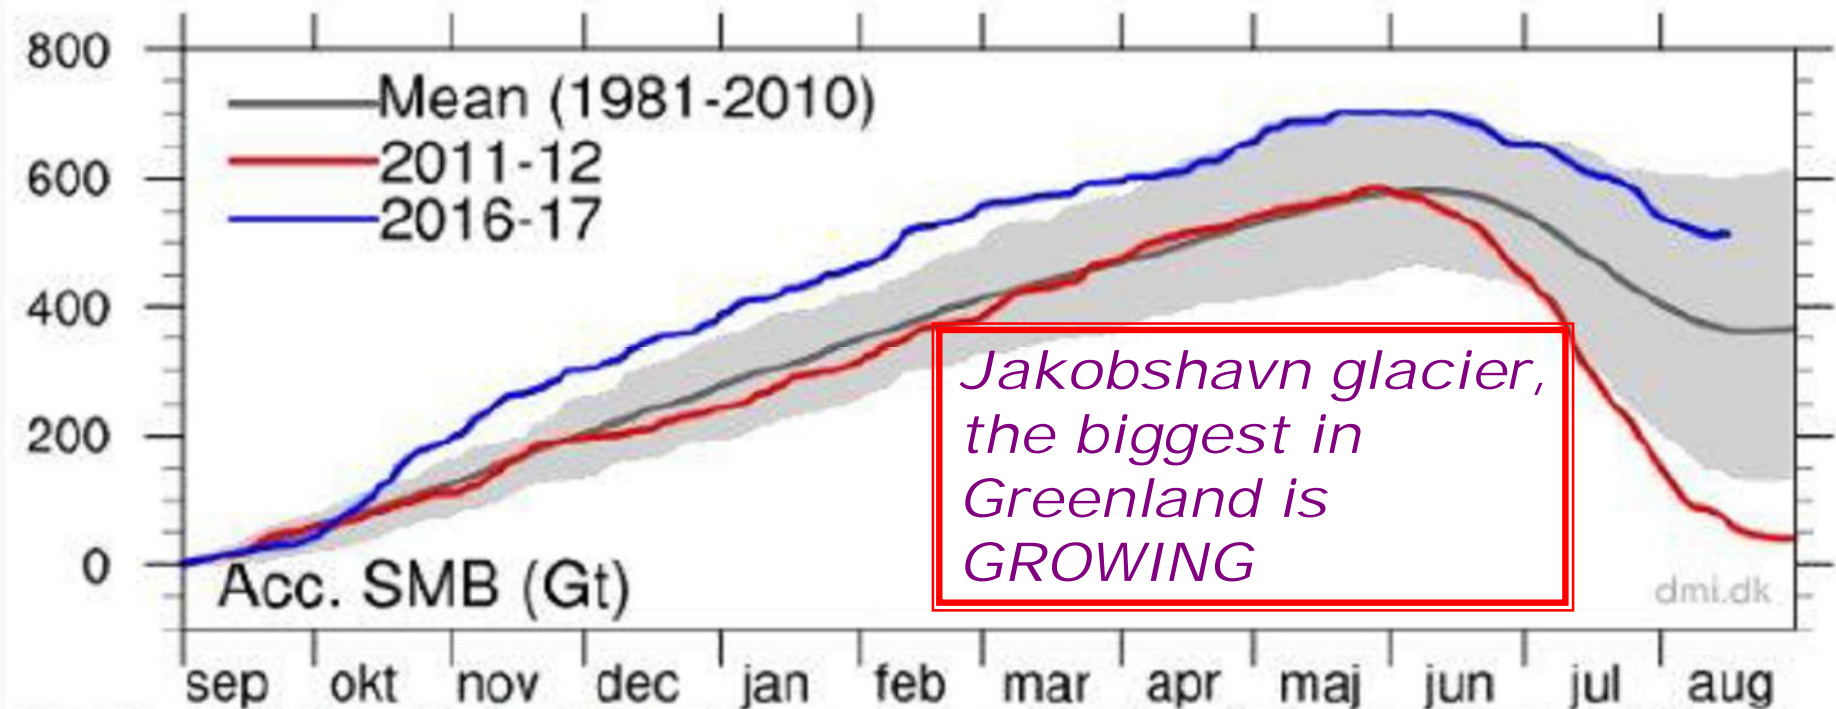

•Piers Corbyn (1 Mar): "Let's be clear, **EVERYTHING** the CO2 warmists now tell you is a **DELIBERATE LIE AND THEY KNOW IT**. They are now using a carbon (LOL) copy of Goebbels' method - the bigger and more absurd the lie the better because no-one will believe (they hope) that such an absurd claim would be made up by those in authority **as long as it is repeated often enough**. Now we have the crescendo of their death scream. "**Warm is cold**" repeated on and on.

# The facts negate the CO2 warmism story

- The #WildJetStream (#MinilceAge circulation) brings **Cold-Warm-Dipoles** – ie milder than normal arctic and snow in the Sahara –cold areas larger than mild.

# The Changing Jet Stream

# Low solar activity shifts (NH) Jet Stream further South

It gets more and more wavy and WILD – making more extremes and dramatic wild weather changes.

There is a **60 year cycle** in Jet Stream waviness

Most weather parameters - explained by Piers Corbyn's Solar Lunar theory

There are many signals in weather data all(?) solar/lunar in origin – 155d, 11yr, 22yr...

Cycles of variation - PSDs - of Solar Particles {Geomagnetic Activity, aa\_detrended} & World Temperatures (125 zero's added) 1868 - 1998

Peaks on this plot mark the main periodicities present in the data

Piers  
Corbyn,  
Weather  
Action

The main signal in Geomagnetic activity is the 11 yr solar cycle. The largest and highly significant signal in World Temperature records is the Solar-Magnetic, or Hale Double-sunspot cycle of 21 to 22 years since 1868

World Temperatures or **ANY** weather parameter or pattern/relationship/correlation are essentially driven by (modulated) solar effects

## So what drives world temperatures?

<b>World Temps</b> Or any other weather parameter / pattern	=	<b>Solar Activity</b> (level & Timing)	X	<b>Magnetic Links</b>	X	<b>Lunar Modulation</b>
		(11yr)		22yr		(18.6/9.3yr)
				<i>SLAM gives the 55-60yr signal</i>		
		<b>Need</b> Can estimate		<b>Known</b>		

## By What Agencies & Mechanisms ?

The **Total Weather State** of the earth at any time is essentially defined by its '**SWT**' State

**SWT = (Solar activity indicators) x (sun-earth Magnetic links) x (stratospheric winds) x (season) x (lunar modulation)x(etc)**

→ **Total Weather State = TWS**

**or SWT → TWS**

The **SWT State** (= a set or 'vector' in SWT phase space of *Weather Action Indicators*) is predicable forwards & backwards in time!

**A specific SWT state in the future will in general have corresponding similar SWT states at times in the past.**

The weather **EVENTS** in those past states and times are similar to what will happen in the future and such **LOOK-BACKS** (events or short periods) are therefore **PREDICTORS** for future weather.

**Weather extremes of recent years are part of natural essentially predictable processes\***

**Severe summer floods 2007, 2008, 2009 not 2010 & 2011(Scot) 2012 !**  
**like very wet summers 1875, 1876, 1877 not 1878 & 1879 1880 !**  
**- associated with the approx 132 yr pattern\* : 6X22=132, 7X19=133**

**The 2007, 2008, 2009, 2011 and 2012 summer floods were predicted in detail by the SWT/SLAT. This flood-likely summers situation can continue for a few years but is SUBJECT TO other conditions (SWT) being satisfied.**

**The Russian superheatwave & Pakistan superduluges were also preceded by similar events ~132 years before - 1878**

**\*First explained by Piers Corbyn to Imperial College Union President's centenary dinner 27 July 2007.**

***The slow sea level (volume) rise - 6 inches per century - will continue\*\* even as world surface cools. It is just ocean volume expansion due to ongoing warming of the deep ocean (which is still cold) since the end of the last ice age 10,000 years ago. NOTHING TO DO WITH CO2!*** {\*\*notwithstanding changes in ocean floor shape such as the appearance of trenches and sumps in the Pacific as the Indian sub-continent pushes up the Himalayas and drive Tsunamis}

## Proven success of Solar Lunar Action Technique

**Met Office forecasted *BBQ / Sizzling SUMMERS* 2007, 2008 & 2009**

**Piers Corbyn (WeatherAction) forecasted *FLOODS* months ahead for each of the three summers. So what happened ??!!.....**

**Tewkesbury Floods July 2007 (left) + County Down in Northern Ireland & Fife in Scotland struck by flooding on Wed 12 August 2008 + 7-year-old Max Preston, from Merseyside, paddles his kayak around tents on a campsite Keswick 29 July 2009.**

Britain and Ireland were 'under water' July 2007. Summers of 2008 & 2009 were also mainly very wet in Britain & Ireland (espec Nth Britain in 2009) contrary to the forecasts of Standard meteorology and in agreement with WeatherAction long range forecasts. WeatherAction also predicted much **detail** of the worst deluges from months ahead & out-ran TV forecasts from a few days ahead for details, **intensity and timing** of many deluges.

- Piers Corbyn's Solar-Earth-Weather Science is advancing all the time.
- Solar Weather Technique (SWT) now Solar Lunar Action Technique (SLAT)

Basic idea is solar activity (particle and magnetic effects), modulated by Lunar factors affect Jet Stream and weather developments on hourly, daily, annual, decadal, centuries and millennial time scales.

***Jet Stream shifts are the key to weather and climate***

**Q. WHAT CAUSES WEATHER EXTREMES?**

***(short term) & CLIMATE CHANGE (long term) ?***

**A. Jet Stream Changes - The changing patterns of weather particularly the track of Low pressures**

**Q. What Moves The Jet Stream?**

**A. (Revolution) Jet Stream changes are driven by Solar particle/magnetic activity & Lunar modulation.**

**The Shifts are **LARGELY PREDICATABLE** by Solar Lunar Action Technique (SLAT)**

## Odd and Even Solar Cycles have different electrical effects on Earth

**Wavy current sheet and hence varying magnetic sectors ~change each week => effects at sector boundary crossings eg on vorticity area index**

# Odd and Even Solar Cycles

### DECEMBER 2010

**Extremely cold and exceptionally snowy**  
**Probably the coldest\* December for 100 years**  
 (80% confidence) and very likely (90% confidence) to be in the 3 coldest Decembers in 100 years. (\* using Central England Temperature measured)

**Frequent snow and blizzards at times especially in central and East / NE England on Northerly and North/ Easterly winds.**

- Frequent, black ice and freezing fog
- Extremely sharp frosts with record low temperatures.
- Scotland probably drier than other parts and extremely cold especially East & central parts.
- West Ireland & far SW England less cold with short milder South-Westerly flow at times.

<b>Christmas</b>	Widespread blizzards & snow deluges; probably snow in all parts of Britain & Ireland over Christmas / Boxing Day.
<b>New Year</b>	New Year's Eve probably dry, bright and bitterly cold. Snow returns on New Year's Day.

**Key Pressure developments Dec 2010**  
 Britain & Ireland will be often dominated by high pressure over Scotland or to the North of Scotland connected either to High pressure over Scandinavia or (probably less often) Arctic/Greenland while active low pressures dominate South Europe / Biscay and also attack from the West at times but are largely blocked and take a local Jet Stream South path.

Snow deluges and white-out struck Newcastle 29th Nov

### Blizzards & thunder confirm

### WeatherAction forecast advance

The end of November blizzards, white-out and thundersnow in North/East Britain dramatically confirmed WeatherAction's "wild weather" warnings that the Met Office would seriously underestimate the severity of the coming snow storms.

Piers Corbyn - Astrophysicist of WeatherAction says "Getting thundersnow and double the snow amounts in Met Office forecasts - both occurrences of which we warned - was great. This snow hit was especially important because although our long range November forecast had gone very well up to 21st November, the end of the month was not wet and mild as we had originally expected, but snowy. Our new advance in our SolarLunarActionTechnique to SLATS explains why the circulation switched to blizzards, why relatively rare thundersnow was also likely and gives more confidence in our exceptionally cold winter forecast."

See: <http://www.weatheraction.com/displayarticle.asp?a=2765&c=5>

WeatherAction well captured the cold late “Jet-Stream South” Spring 2013 & won the British Asparagus award for the date to market of field Asparagus – 5week delay.

**MARCH 2013** – April 1 inc Easter | Headline summary & essential development.

**First half mostly cool or cold with some sleet and snow in the North and East. Warm and fine at times especially in South from mid-month. A wet, windy, cool month end.**

- The first 12 days has generally Northerly / Easterly or sometimes cyclonic/easterly flow with high pressure to the North of the Europe / NW Atlantic region and the Jet Stream well South of normal.

## WeatherAction won British Asparagus Start Of Season Forecast Competition

• Weather Action beat all for long range forecast of *very delayed cold Spring*

Thanks for getting in touch Piers.

**Congratulations, your prediction for the start of the season is the closest – please send me your address and we will send you some asparagus? It has been a bit of a stop start season but the growers confirmed that there would have been plenty around at the weekend.**

Also what's your twitter handle?

Thanks

Data by: Mike Theiss    Equipment: Kestrel Unit #02    Device Location: St. Marks, Florida    Device Elevation: 6 feet (ASL)

### Hurricane Hermine Has Moved Further East

National Weather Service - New York, NY

#### So what's changed?

- Hermine has tracked further east than previously expected.
- A slightly further east storm track results in slightly lower surge forecasts.
- If Hermine continues its eastward track, tropical storm force winds become less likely for NYC, while Eastern Long Island and SE Connecticut could still see gusts.
- Life threatening rip currents and high surf still pose a significant threat, especially along Atlantic facing beaches.

## **SKILL! Extreme Storms – The two most significant storms hitting Britain / Ireland in last 3 yrs**

**Oct 28<sup>th</sup> 2013 South / SE England (Storm Jude)**

predicted by WeatherAction 5 months ahead at **GAFTA** (Grain and Feed Trades Association) conference Geneva

**28-30 Dec 2015 (Storm Frank) Ireland + Britain**

predicted by WeatherAction 10 weeks ahead

SLAT got both very well. Met Office had good detailed short range forecasts for both in terms of timing and general track.

However significantly eg Oct 2013 WeatherAction correctly warned MO would underestimate storm power. WA also gave a small correction to track which was confirmed. (Same method applied to Hurricane Irene)

# The Claim that 97% of (climate) scientists believe Man-Made CO2 Global-Warming is False & Irrelevant

***They basically just counted people who had mentioned Climate-Change in an abstract or headline in scientific papers***

***“0.3% climate consensus, not 97.1%”***

PRESS RELEASE – September 3rd, 2013

A major peer-reviewed paper by four senior researchers has exposed grave errors in an earlier paper in a new and unknown journal that had claimed a 97.1% scientific consensus that Man had caused at least half the 0.7 C° global warming since 1950.

The new paper by the **leading climatologist Dr David Legates** and his colleagues, published in the respected *Science and Education* journal, now in its 21<sup>st</sup> year of publication, reveals.....The consensus Cook considered was **the standard definition: that Man had caused most post-1950 warming.....**

**“Even on this weaker definition the true consensus among published scientific papers is now demonstrated to be **NOT 97%, as Cook had claimed, but only 0.3%”.****

*Temps drive CO2 as ice ages end.  
Fast CO2 changes (like now) are hidden*

*At the end of the last ice age temperature changes LEAD CO2 by 800yrs*

**Similar leads are in Antarctic Termination III 240kyr ago**  
(Caillon et al Science Mar 03)

*CO2 diffuses through ice*

CO2 data points are at best 200yrs apart and show only small variations between points. This is because CO2 is a gas and diffuses into centuries of ice layers. The present CO2 spike will amount to a mere blip in 1,000yrs time.

*There is No Evidence that the present CO2 rapid rise is unique.*

***Inconvenient Truths for GW Orthodoxy!***

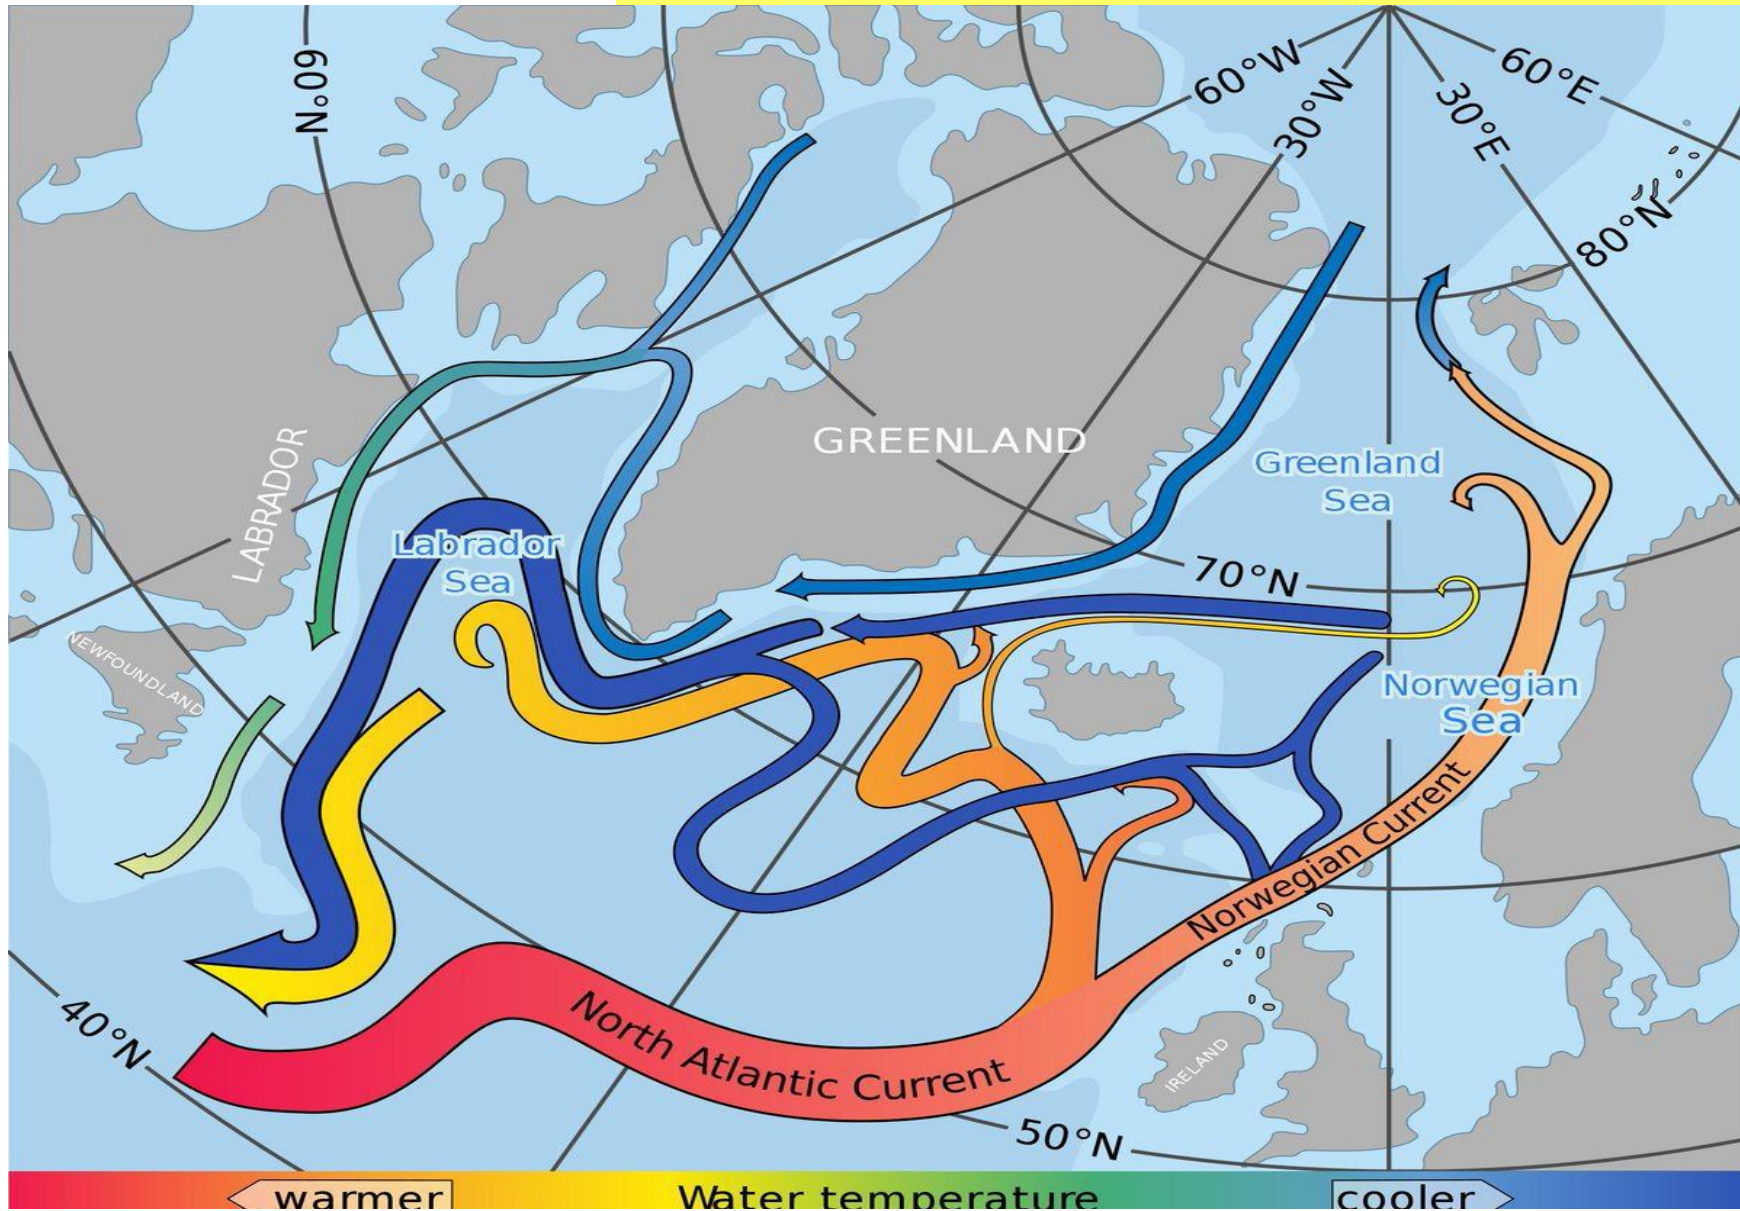

At a meeting Piers said: "There is just one timescale where CO2 & temperature correlate well, that is on averages of about a hundred years; BUT this shows **TEMPERATURES CONTROL CO2** which changes AFTER temperatures have changed"

# CO2 levels FOLLOW (sea) TEMPS

- \*Dynamic (Sea surface - air): Air residence time ~3yrs
- \* Large scale Ocean circulation; CO2 lags temp ~500-800yr

# CO2 levels FOLLOW (sea) TEMPS

\* Large scale Ocean circulation; CO2 lags temp ~500-800yr

# Solar activity drives Arctic "gateway" ocean currents

OCEAN heat transport to Arctic largely correlates with geomagnetic activity (Ap)

Many notable peaks and troughs match. There is also signs of a 7 year (Seasonal stratospheric QBO repeat) signal in Arctic heat transport.

Thanks to [Ilmasto tiedotus @ilmastotiedotus](#)

# Science shows the Man-Made CO2 Global-Warming / Climate-Change is nonsense in 4 key points

1. There is no evidence now and there never has been in real world data for CO2 levels controlling world temperatures. In fact world temperatures are now falling (using accurate satellite data rather than UN fraud data see slide 6 in pdf\*\*) while CO2 levels are rising.

\*\* See <http://www.weatheraction.com/docs/WANews15no16.pdf>

2. Man's CO2 flux in and out of atmosphere is only 4% of total. The idea that this dominates the other very variable 96% is **deranged** - slides 1+3 of pdf link above

The fact that termites produce ten times the CO2 equivalent of man means **Obama and the Pope would do better at reducing CO2 by declaring WAR ON TERMITES.**

Interestingly all Obama's wars hitherto have upset the stability of middle-east oil production to the benefit of USA oil production (the USA is now an energy exporter not net importer).

3. World sea temperatures control CO2 levels under basic laws of physics so over thousands of years sea temperatures (which follow solar activity) LEAD CO2 levels by some hundreds of years, see slides 7+8 in pdf. This is an observed fact.

In everyday life if you warm a glass of fizzy drink CO2 comes off and if you cool it then it will absorb more CO2. The deranged CO2 theory will have you believe that putting extra CO2 above a glass of drink (or anything) will warm it up. Of course this idea is a deranged tail-wagging dog nonsense.

**In summary: The Man Made Climate Change fails because of 3+1 = 4 points:**

- 1. CO2 levels are an EFFECT NOT CAUSE of changes in climate**
- 2. Man's CO2 only 4% of total; CO2 warmism is mad Conspiracy of Nature theory**
- 3. The Sea Rules not Man**
- 4. All extremes now are the wrong type of Extremes for The CO2 story - because Wild Jet Stream negates flatter Jet Stream CO2 story.**

**SCIENCE REQUIRES EVIDENCE! The evidence is against the CO2 story.**

# The CO2 Story is Bad Science 1 – Air & Sea

# Why CO2 theory does not work 1

1a) BBC/ Royal Institution CO2 'Experiment' is a conjuring trick.

1b) Basic idea of the process – *as portrayed in media and schools* is **daft**. The radiation 'arrows' do not exist. Typical Infra Red range is 25metres and the re-radiation assumption is absurd. **Photons are not conserved**

The assumption of radiative balance at (every) level of the atmosphere is absurd

**This False physics is not in fact what some Warmists / Luke-Warmists argue.**

Water vapour supposed magnifier Not shown – Anything X zero = zero

# The Co2 Story is Bad Science 2 – Warming?

Quicker warming of air containing extra CO<sub>2</sub>  
(or any GH gas)  
What's it all about?

Two bottles of air  
Near a body at  
Temp  $T_1$  (or use a  
light with this equivalent  
of Infra Red)

So we are told the extra  
CO<sub>2</sub> gets warmer and  
makes the atmosphere warmer.

IS IT TRUE?

# The Co2 Story is Bad Science 3 – No warming!

What happens after a while?  
The two bottles reach THE SAME TEMPERATURE.

THE RATE of warming and  
cooling goes up with CO2  
NOT THE FINAL TEMP.

⇒ NO WARMING ⇐

Take away the  
warmer body  $T_1$  and  
the one with extra CO2  
cools quicker.

# The Co2 Story is Bad Science 4 – Really Bad!

SUPPOSE the bottle with extra CO2 actually did get warmer after a time than the less CO2. **IS THIS POSSIBLE?**

If the low CO2 reaches  $T_1$  and the extra CO2 is warmer we have heat moving from cooler  $T_1$  to warmer  $T_2$  with no work done; and we could use the TEMP difference to run a perpetual motion machine!

# The Co2 Story is Bad Science 4 – Really Bad

SO.....

- *The “CO2 blanket” / “back-radiation” Greenhouse Effect is Nonsense – **Bad Physics**; It violates basic thermodynamics*

- *The First Law, Second Law and the principle that **the equilibrium temperature of anything in a radiation chamber is independent of colour!***

- *There is another version which is not quite such bad physics and is the ‘**serious version**’ but not promoted by the BBC who use the brainwashing for schools version;*

- *This is the Lapse-Rate (cooling with height as in standard Meteorology texts for the last 100yrs) argument **BUT THE CO2 ADD-ON ALSO FAILS.....***

# Why CO2 theory does not work 3

The atmosphere is colder higher up due to gravity. More CO2 shifts the outgoing radiation level (Temp  $T^*$ ) & 'lapse' line up  $\uparrow$ . So it should get warmer *there*  $\rightarrow$  & on *surface*. **BUT IT DOESN'T**

AND The GWers predicted **HOTSPOT** above the equator is **NOT THERE**. It's a **COLDSPOT** instead.

*What's Up? PHYSICS Possibilities*  
Apart from **IMPORTANT** change in clouds/ reflectivity of atmosphere & *evaporation from oceans!*

1. A day night effect causes extra upper level cooling for more CO2
2. Changes in lapse rate curve due to changes in IR at different levels
3. **COOLING FEEDBACKS** - eg: Transpiration **cooling by plants of the surface increases with CO2.**

# Why CO2 theory does not work 4

In the real atmosphere there are day/night temperature fluctuations (eg in upper atmosphere). They are larger with more CO2 because CO2 (infra red absorber / emitter) gains & loses heat easier than N2 & O2 and so enables all the air to adjust quicker.

Temp

Range  $2r$  goes up with extra CO2

For cold spot 0.1deg,  $T \sim 240K$  extra range about same as original range,  $r$ ,  $2r$  is about 5 or 6 deg. This is maybe higher than obs estimates.

Average radiation out is  $= 0.5 b [ (T+r)^4 + (T-r)^4 ]$

Work it out for the same radiation. For an increase  $\Delta r$  in half range,  $T$  will have to go DOWN:  $\Delta T = - 3 \Delta r \times r/T$  (Detail subject under research)

This could (help) lead to a *COLDSPOT* on the equator - which is **observed!** AND shift the lapse line (at upper level) back to where it was.

# CO2 theory does not work

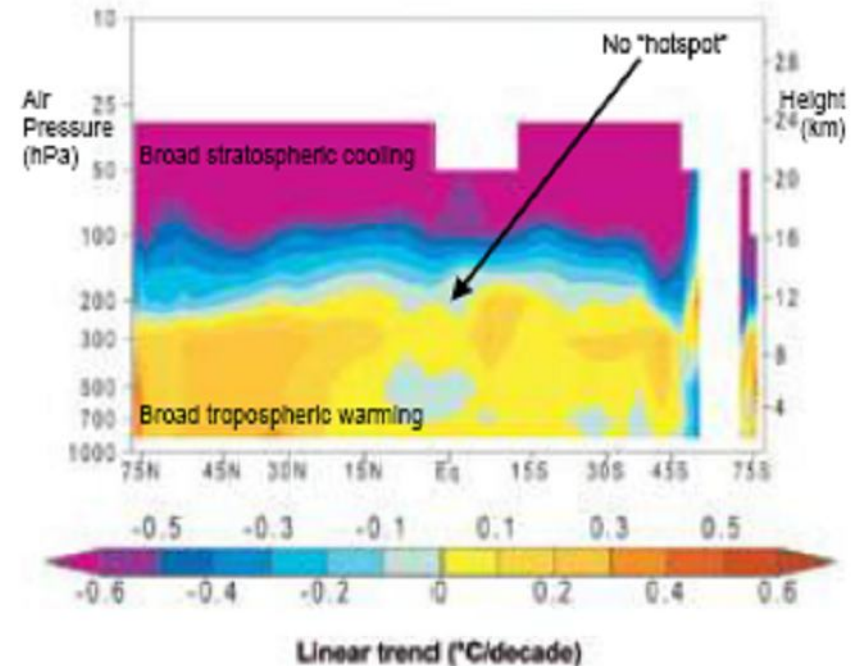

Figure 2: The observed pattern of atmospheric warming, 1979 – 1999, annotated.

What we *don't* see is a hotspot at the top of the tropical troposphere. There is no hotspot at all at 10 – 12 km up, from 23°N to 23°S: indeed, much or most of the troposphere warmed by more than the region where the hotspot would be.

## THEORY of **HOTSPOT**

For cold spot  $-0.1\text{deg}$ ,  $T \sim 240\text{K}$  extra range about same as original range,  $r$ ,  $2r$  is about 5 or 6 deg. This is maybe higher than obs estimates but not absurd. There may be magnifiers.

# The developing MIA (LIA) circulation on now – **MAJOR insurance Issues**

(Also <http://www.weatheraction.com/displayarticle.asp?a=451&c=5> ) is **Solar Climate Change** here & now & is characterized by:

1. Sun generally quieter & magnetically more confused, solar wind slower.
2. Very large amplitude swings in the Jet stream (NH and SH) with the Jet stream average position shifted equator-wards => **More 'Sandy's'**
3. General Cooling especially of temperate zones and simultaneous warm and cold (larger) regions marking different 'ends' of jet stream large amplitude wave effects.
4. Very rapid changes in weather particularly in temperate zones
5. Rapid changes in standard parameters – NAO, AO etc
6. Stark extremes including more giant hail and tornadic developments (higher lapse rate)
7. An increase in major earthquakes and volcanism
8. **Serious limitations of the powers of standard meteorology even 1 or 2 days ahead at times. This was in evidence through most of April and May 2012. These problems will largely continue for at least 25 years and no amount of tweaking standard models or increasing computer power even a thousand fold will overcome it. Standard Meteorology is past it's peak.**

SLAT8 is designed to better predict in *the approach to the New Little Ice Age circulation patterns* the world is now in and uses a wider range of look-back weather data (NB we are constantly seeking more) and considers more rapid change options which may need more modification or changes (if rules suggest) of Look-Back maps particularly under potential sudden Jet stream switches and consequent sudden warming or sudden cooling in regions. SLAT 8 will also (as previous SLATs but more effectively) be able to give long range warning of impending errors in standard Meteorology.

A general inference of SLAT is that the Little Ice Ages\*\* and periods such as The Medieval warm period and Bronze age were consequences of solar-lunar driven Jet stream shifts and hence covered the whole of the temperate zones in both North and South hemispheres at around the same time.

\*\* Eg the Maunder Minimum around 350 years ago and the Dalton Minima around 200 years ago.

*REAL CLIMATE CHANGE IS HAPPENING NOW, DRIVEN BY THE SUN & NOTHING TO DO WITH CO2!*

The United Nations has publicly stated its goal is not to ‘solve’ climate change, but to seek to redistribute wealth and expand its authority through more central planning. UN official Ottmar Edenhofer, co-chair of the IPCC Working Group III, admitted what’s behind the climate issue: “One must say clearly that we redistribute de facto the world’s wealth by climate policy ... One has to free oneself from the illusion that international climate policy is environmental policy. This has almost nothing to do with environmental policy anymore.”

## What does Global warming / Climate Policy eg of UN IPCC / UK Climate Change Act 2008 achieve?

1. *It does NOT reduce CO2 production but re-locates it* – eg transfer of Steel production Teesside to India simply exports CO2 production and the EU makes us pay for it! Wind-Farms use coal-fired back-up for when wind doesn't blow.
2. *The economic effects are catastrophic:*

## GOVERNING EQUATIONS

A time varying magnetic field induces an electric field  $E$  in the oceans, given by

$$\partial_t \mathbf{B} = -\nabla \times \mathbf{E}, \quad (6)$$

where  $\mathbf{B}$  is the sum of the inducing and the secondary induced magnetic field. The induced electric field drives electric currents

$$\mathbf{J} = \sigma \mathbf{E}, \quad (7)$$

generating a secondary induced magnetic field

$$\mu_0 \mathbf{J} = \nabla \times \mathbf{B}_{induced}. \quad (8)$$

Combining equations (6), (7) and (8) yields

$$\partial_t \mathbf{B} = -\nabla \times \frac{1}{\mu_0 \sigma} \nabla \times \mathbf{B}_{induced}, \quad (9)$$

which is the equation for induction by time-varying magnetic fields inside the oceans. In contrast to the motional induction discussed above, the oceans are assumed here to be stationary in the Earth fixed reference frame. The field in the source-free region above the Earth's surface and below the external current systems is again given by Laplace's equation

$$\delta = \sqrt{\frac{1}{\pi \mu_0 \sigma \nu}} \approx \frac{270 \text{ m}}{\sqrt{\nu}}, \quad (10)$$

where the frequency  $\nu$  is given in Hz and a sea water conductivity of 3.5 S/m is assumed. Thus, to effectively penetrate through a sea water column of 5 km, magnetic disturbances have to have periods longer than about 6 minutes. However, even up to periods of several days, induced fields are strongly influenced by the highly conducting oceans.

## OCEAN INDUCTION BY MAGNETIC STORMS

While daily variations during solar quiet conditions generate significant induction in the oceans, a much stronger effect is caused by magnetic storms. Strong magnetic storms generate ocean induced magnetic fields reaching magnitudes of more than 100 nT. An overview of induction in the oceans by solar quiet and storm time fields is given by Fainberg (1980). The induced currents are concentrated near the coasts, the horizontal

Rock, especially molten rock (Lava) also have electrical properties and couple DIRECTLY to solar storms independently of atmospheric effects – hence the correlation between severe Earthquakes / volcanoes and WeatherAction predictable R5 and R4 "Red weather"

# The mechanics of rapid shift into the new Little-Ice-Age

*Generally Low magnetic+particle Solar activity with occasional bursts of extra activity*

*JetStream (NH) Longer & **South Shifted***

*MAJOR Earthquakes & volcanism*

*Area of winter snow cover & sea ice increases*

*Solar radiation cut espec if ash reaches stratosphere*

*More Sunlight reflected*

*Colder & feedback accelerates cooling*

# WEATHERACTION

Instead of a super-computer SLAT uses the whole sun-Earth-moon-etc system as its own computer and applies the principle similar input => similar output

The existence of solar-Lunar signals in weather data is evidence that similar input => similar output HOLDS; ie THE SOLAR-LUNAR DRIVER IS ESSENTIALLY NOT CHAOTIC

## Solar-Lunar DRIVER

SLAT could choose between ensemble options

There is nothing fundamentally **new** in weather.  
It has essentially all happened before.

Connections 'OFF' = Ice Ages – The norm of sun-earth links in the last million years

Similar Sun-Earth-Magnetic-Lunar states give similar circulation/weather ⇔ **Look-Back periods** tell when to look in the past for weather (1 factor) corresponding to similar future Solar-magnetic-Lunar states.

# Pushing for new paradigms in Science and politics

- **Consensus NEVER advanced science. Science only advances by consensus-breaking.** Modern Science is organized to defend consensus
- **“Science” that is not evidence based is not science.**
- **Modern Climate “Theory” is religion not science**

- **Standard gravity theory requires 96% of the universe to be dark matter which can't be found.** This depends on one view of Relativity - an **incomplete** theory. New approaches are needed.
- **Standard particle physics FAILS** “at the 4sigma level” – that’s bad – to predict (eg) muon-electron interaction outputs.

**A NEW independent academy to advance accountable evidence based science & politics is needed**

Note there are other variants of electromagnetism /electrodynamics - "Ampere variants" which would likely do better than Einstein A.

**Based on this rough assessment Einstein B & 'Electric Universe' are best.**

Note. The 'Electric Universe' movement covers many very different activities. Here we mean applicable electromagnetic ideas.

**It's curious that Einstein A is the worst, yet is the modern standard model.**
